

ECW ECO COMPOSITE-WOOD

DECKING • FENCING • CLADDING • TILE DECKING

The most advanced outdoor building materials for professionals and DIY-ers
Maintenance Free • Never Rots • Termite Resistant • Real Timber Look

Benefits of ECW Tile Decking

- Cover concrete / patio areas
- No maintenance
- Easy to lay
- Quick to install
- Durable and resilient
- Easy to cut
- No tradespeople required
- No tools
- Cheaper solution than building a real deck

ECW Tile Decking can be installed by anyone. Even your children can do it. Also the most cost-effective alternative to get that traditional deck look and feel at a much lower price.

Requires no sanding and no coating. Can be cleaned by sweeping or with a mop and hose.

This option is great if you have no power tools. There are no adhesives, nails or screws needed. If you have an unusual shape deck, you can cut with a jigsaw, circular or drop saw with ease for that professional finish.

How to Install

1. Decide on a pattern (straight or crisscross)
2. Start in one corner, preferably at a wall
3. Lock the tiles together
4. Work outward until the area is tiled

Notes

- Cut around any pipes or obstacles with a jig saw
- Use a straight edge and a circular or jig saw to cut off the excess

The Perfect DIY Solution

We are not just a supplier; we deliver our best practices to our customers to ensure our customers can build a project knowing exactly what they need to do and how to go about it.

Email us your photos, location and a plan so we can get started straight away:

composite-wood.com.au/contact-us

Have left over materials after completing your project? No worries! Just bring them back to us and we will provide you a 100% refund on the materials you didn't use, providing they are full and undamaged units.

Colour Range

We have a range of 6 colours to choose from. The most popular colours are Charcoal Black and Teak. Other colours can be made to order.

Product Care

While our products are maintenance free, they do need a clean every now and then. For cleaning and removing watermarks, sponge mops with cold or soapy water work well as they can clean inside the grooves. Also, high-pressure cleaners can be used.

Take care and protect your deck. Ensure no sharp objects can be walked on, damaging the surface. Ensure furniture have rubber feet to cover exposed metal. Do not allow metal items to sit and rust on your deck.

Most marks, grease from your BBQ and scratches can be sanded out easily with 40 grit sandpaper with the grain (only exception is our wood grain boards).

Delivery & Pickup

We offer Australia-wide distribution using TOLL at exceptionally low prices. We can deliver to your door or 'care of' a commercial or industrial company with a forklift near you for exceptionally low prices.

We also offer RUBICAB local deliveries throughout South-East Queensland and Northern NSW. You are also welcome to come and pick up at the RUBICAB Factory.

Warranty

We offer a simple to understand 10-year guarantee on all ECW products fit for residential purpose and 7 year warranty for commercial applications. Providing a contractor or builder installs it. Or, if you are a DIYer, built using our guidelines.

Our warranty mostly covers structural defects. We will replace your ECW material if installed and used under typical conditions. We will replace the defective product if it cracks, splinters, bows or suffers an infestation of woodborers or termites.
